ABSTRACTED-PUB-NO: KR2001100660A

BASIC-ABSTRACT:

NOVELTY - A method for manufacturing a plasma display panel is provided to seal efficiently an exhaust part by installing an O-ring on an exhaust hole and inserting and melting a glass frit therein.

DETAILED DESCRIPTION - An upper substrate(26) is combined with a lower substrate(28). An O-ring(54) is adhered on an exhaust hole(36) formed on the lower substrate(28). An exhaust tube(48) is installed on the O-ring(54). A branched tube(48A) is formed at one side of the exhaust tube(48). A cap(50) for inserting a glass frit(56) is formed at an end portion of the branched tube(48A). Air is removed from a space between the upper substrate(26) and the lower substrate(28) by using a pump and a gas line. A gas is implanted therein. A beam is irradiated to the upper substrate(26) by using a laser or a lamp(58). The glass frit(56) is melted and the exhaust hole(36) is sealed by irradiating the beam.
